

# SEVEN HILLS HOSPITAL

## STEPPING STONES POSITIVE REINFORCEMENT SYSTEM

Seven Hills Hospital provides treatment that focuses on positively reinforcing or rewarding appropriate or positive behavior. Positive behaviors include being completely honest, actively participating and using time wisely, following directions and rules, being responsible, keeping yourself and others safe, and showing respect for others and their property. Each track during the Stepping Stones program will have privileges associated with healthy behaviors that will essentially provide skills that your child can benefit lifelong. Staff are dedicated to guide your child to a happy and healthy life. The estimated completion of the Stepping Stones program is approximately 7 days. Each child will be assessed on an individual basis and the length of stay may vary based on circumstances and their readiness for discharge.

### FAMILY INVOLVEMENT

You will be expected to be involved in your child's treatment. You may be asked to be involved in the assessment process, treatment planning, discharge planning, and other activities. Family Therapy is held when appropriate. Family Therapy helps you and your child listen, talk to, and get along better with each other. Your child's Therapist or other members of the treatment team will be available to your family to discuss treatment, progress, and other issues.

Improving the quality of life for our patients, their families and the community.

## DISCHARGE PLANNING

Your child will be involved in developing a discharge plan. Their Therapist will meet with your child to formulate their Discharge Plan. Your involvement in discharge planning is needed in order to help your child meet their goals after they leave the program. This Discharge Plan describes any need that your child may have and any treatment or professional help that your child need. With your permission your child's discharge plan will be shared with other professionals involved in their treatment.
